**DETAILED ACTION**

1. The Amendment filed by Applicant on 09/29/05 has been entered.

***Response to Amendment/Arguments***

2. Applicant's amendment and arguments filed on 09/29/05 have been fully considered and they are found unpersuasive.

3. The rejection of claims 1-43 and 52-53 under 35 U.S.C. 102(b) as being anticipated by Fournier et al., WO 97/17129 (hereinafter "Fournier") is withdrawn.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for

Art Unit: 1713

establishing a background for determining obviousness under 35

U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1-43 and 52-53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fournier et al., WO 97/17129 (hereinafter "Fournier"). Fournier teaches a polymeric membrane produced by cross-linking poly(vinyl alcohol) with a polyfunctional cross-linking agent (glutaraldehyde). Fournier, pages 10-11. Fournier differs from the present invention in that Fournier does not specifically recite the concentration of cross-linker in the polymeric membrane. However, Fournier does state the concentration of cross-linker/membrane of 2.76%. See Fournier, page 11. The teaching of Fournier and the broad range in the present claims would lead one of ordinary skill in the art to the broad claim range.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is

Art Unit: 1713

reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

8. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
